Subject: Stackability of pallets ex. BASF

Antwerp & External Loading Places

Dear Logistics Service Provider,

You are informed by our newly implemented cargo securing measures for transports ex. BASF Antwerp & our External Loading Places. In reference thereof, we would like to communicate the additional change regarding the stackability of pallets.

As from 29/06, for all transports ex. BASF Antwerp and its external loading places, pallets can't be stacked anymore, unless boxcontainers are being used. The measure is both applicable for Polyol- and Amine products.

With this load securing measure, we hope to further increase the safety on the roads in general, to guarantee the safety of your respective driver and to avoid damaged packaging- and goods to our customers.

Freight calculation remains unchanged and for all new tenders, this requirement will be added to the tender documents.

Yours sincerely,

BASF Antwerpen N.V.
