

In the driving seat for comfort.

With Elastoflex[®] W, the moulded flexible foam from BASF Polyurethanes, you travel relaxed and in comfort, whatever the situation.

Less foam, greater relaxation.

Elastoflex® W high-comfort foams are tailor-made products for all seating applications in cars, trucks and buses. Manufactured to customer specification, they display enhanced comfort and outstanding continuous usage characteristics. In weight- or height-reduced seating foams, these polyurethane products ensure exceptional comfort. And, last but not least, the excellent flowability of Elastoflex W systems gives mouldings producers high design freedom and permits foaming around inserts and backing materials. BASF polyurethane products for the automotive industry offer both: high-class interior designs as well as efficient production processes.

Elastoflex W – just right for your comfort zone.

- Steady aging characteristics
- Excellent values after fatigue testing
- 10 – 15 % weight savings
- Simple processing
- Fits with ease into existing processes
- Very good flowability
