BASF Freeport manufactures products that can be found in more than a thousand different end-use products.

Products such as:

- Ammonium sulfate used in fertilizer
- Polyamide-6 used in fiber for carpeting and apparel, food packaging Film to improve self-life and light-weight parts for vehicles
- Acrylic monomers are used to produce paints, adhesives, and caulks and sealants
- Super absorbent polymers which can be found in baby diapers
- Oxo Alcohol/Polyalcohol products are used to make wood finishes, PVC siding, oils, plastic coatings, and herbicides
- The Dispersions plant produces architectural coatings, construction chemicals, and adhesives

Community Relations

BASF supports more than 75 organizations throughout Brazoria County that are focused on building future resources, future skills, and the future health of our employees and neighbors. We want the communities where we live and work to grow and thrive with us. BASF also participates in a Community Advisory Panel (CAP) with other local chemical companies and informed citizens representing environmental and community leaders from the Brazosport area.
