“

## **OUTLOOK FOR 2015**

BASF expects the global economy to grow by 2.8% in 2015, somewhat faster than in 2014 (+2.5%). Yet the risks remain high. BASF confirms its outlook for the full year: BASF aims to perform well and slightly increase sales in a volatile and challenging environment. Income from operations before special items will likely match the level of the previous year.

### *Opportunities and risks*

Overall economic development as well as exchange rate and margin volatility present both opportunities and risks. In 2015, opportunities may arise from the continued growth of the global economy and from the development of key customer industries, as well as through exchange rate and margin volatility.

BASF also sees opportunities in the implementation of its “We create chemistry” strategy and in further improving its operational excellence, as well as strengthening research and development. BASF intends to continue to concentrate on expanding its business in growth markets as well as on innovations, portfolio optimization, restructuring and increasing efficiency.

Yet there are also risks to the development of BASF’s business. These include an economic slowdown in China and uncertainty as to growth in Europe. Risks can also lurk in exchange rate and margin volatility as well as in the development of BASF’s key customer industries. The statements on opportunities and risks made in the Prospectus remain valid.

### *Forecast*

BASF’s expectations for the global economic environment in 2015 remain unchanged:

- Growth of gross domestic product: 2.8%

- Growth in industrial production: 3.6%
- Growth in chemical production: 4.2%
- An average euro/dollar exchange rate of \$1.20 per euro
- An average oil price for the year of \$60 to \$70 per barrel

BASF Group sales are expected to increase slightly in 2015, largely supported by the sales growth anticipated in the Functional Materials & Solutions and Performance Products segments. BASF aims to raise sales volumes overall, excluding the effects of acquisitions and divestitures. Income from operations before special items in 2015 will likely match the previous year's level. BASF anticipates larger contributions from its chemicals and crop protection businesses, whereas earnings in the Oil & Gas segment are expected to decrease considerably due to the lower price of oil. BASF expects a slight decline in income from operations. In 2014, high levels of special income arose primarily from the disposal of BASF's 50% share in Styrolution Holding GmbH. As a result, there is likely to be a considerable decline in EBIT after cost of capital.
