F0. Introduction

(F0.1) Give a general description of and introduction to your organization.

At BASF, we create chemistry for a sustainable future. As the world’s leading chemical company, we combine economic success with environmental protection and social responsibility. Around 111,000 employees in the BASF Group work on contributing to the success of our customers in nearly all sectors and almost every country in the world. As of 2021, BASF’s activities have been grouped into six segments: Chemicals, Materials, Industrial Solutions, Surface Technologies, Nutrition & Care and Agricultural Solutions. In 2021, BASF posted sales of €78 billion, BASF shares are traded on the stock exchange in Frankfurt (BAS) and as American Depositary Receipts (BASFY) in the U.S. Further information on BASF is available on the internet at www.basf.com.

We carry out our corporate purpose, “We create chemistry for a sustainable future”, by pursuing ambitious goals along our entire value chain. In this way, we aim to achieve profitable growth and take on social and environmental responsibility. Our products, solutions and technologies contribute to achieving the United Nations’ Sustainable Development Goals (SDGs).

Our leading position as an integrated global chemical company gives us the chance to make important contributions in the areas of resources, environment and climate, food and nutrition, and quality of life. Dealing with climate change is one of the major challenges to ensure a sustainable future. We recognize the importance of protecting the world’s forests for the well being of the environment and society and we acknowledge our responsibility as an actor in various value chains and therefore, strive to end deforestation within those.

Palm oil, palm kernel oil, and their derivatives are some of our most important renewable raw materials. We aim to ensure that these raw materials come from certified sustainable sources, and actively support the Roundtable on Sustainable Palm Oil (RSPO). In 2021, we published our fifth progress report – the BASF Palm Progress Report – for greater transparency in the value chain. We reached our goal of only sourcing RSPO-certified certified palm and palm kernel oil and purchased 242,946 metric tons in 2021. BASF’s Palm Sourcing Policy addresses the requirements for protecting and preserving forests and peatland, as well as the involvement of local communities. At the same time, we are stepping up our efforts to improve transparency and traceability in the supply chain. We were able to trace 96% of our global palm footprint to oil mill level as of the end of 2021.

As BASF provides products and solutions for many industries, it is vital to additionally consider the potential impacts that the use of our products can have on forests. BASF provides many
solutions for agriculture, including crop protection, nitrogen management, digital solutions, seeds and pest control to enable the sustainable intensification of agriculture by increasing productivity on existing land and by mitigating impacts on the environment, locally and globally. We thus actively contribute to decreasing the pressure to convert forests into arable land.

Livestock is fundamental to meeting the world’s growing demand for products of animal origin like meat, eggs and milk. However industrialized livestock farming substantially contributes to deforestation. BASF offers a range of feed additives (enzymes, vitamins, glycines, organic acids) which make livestock farming more sustainable in particular by reducing the feed conversion rate and thereby improve nutrient and energy utilization from feed. By enabling sustainable intensification of livestock production, we contribute to reducing the pressure to convert forests into arable land or pastures.

We work collaboratively with value chain partners, governments and civil society to conserve forests. BASF partners with a variety of organizations, including Roundtable on Sustainable Palm Oil (RSPO), Forum Nachhaltiges Palmöl, and the High Carbon Stock Approach Steering Group to raise and increase awareness, drive the necessary market transformation and to achieve impact on the ground. Collaborative programs such as Mata Viva, an initiative established in Brazil to drive reforestation and preserve native forests demonstrate BASF’s commitment to preventing deforestation and promoting reforestation.

Forward-Looking Statements: This document may contain forward-looking statements. These statements are based on current estimates and projections and currently available information. Future statements are not guarantees of the future developments and results outlined therein. These are dependent on a number of factors; they involve various risks and uncertainties; and they are based on assumptions that may not prove to be accurate. We do not assume any obligation to update the forward-looking statements contained in this report.

Metric tons

Data coverage
Full commodity production/consumption

Have any of your reported commodity volumes been verified as deforestation-and/or conversion-free?
Yes

% of reported volume verified as deforestation- and/or conversion-free
74.9

Please explain
Methods used to verify deforestation- and/or conversion-free status: With the Together for Sustainability program, risk matrices help us identify suppliers with a high sustainability risk potential based on country and product risks. Using this risk analysis and other evaluations, we audit raw material supplier sites on sustainability standards and initiate sustainability assessments through an external provider. The palm raw materials BASF is sourcing comply with RSPO, ISPO and MSPO standards which include regular audits to renew compliance with these standards. These standards (among others) ensure, that agricultural standards set by the government and standard specific requirements are kept and controlled. In February 2020, the revised RSPO Supply Chain Certification Standard was endorsed by the RSPO Board of Governors. The revised document is the result of an extensive review, integrating and updating the practices and procedures related to Supply Chain Certification (SCC) by the Supply Chain Certification Task Force since April 2019. BASF was member of this Task Force.

BASF also supports the RSPO Segregated certification by purchasing some RSPO Segregated volumes. We downgrade these Segregated volumes and offer Mass Balance certified sustainable products. The RSPO Mass balance certification scheme represents the greatest certified volume for our palm-based products.

RSPO has strengthened their principles and criteria in 2018 and with this being the only certification standard with verified No Deforestation and NDPE implementation. The verification is conducted on a yearly basis through structural and independent audits and assessments on the ground. BASF sources 56% of its entire palm exposure as RSPO certified and therefore 56% of BASF palm sourcing is verified deforestation / conversion free.

In addition we are sourcing another 18,9% of our palm exposure from areas / palm oil mills with a low risk profile according to Global Forest Watch (GFW) Palm Risk Approach. Given the methodology (huge impact of historic, recent deforestation) of this
GFW Palm Risk Approach we consider the risk category “low” as deforestation free. Therefore, the total of 74.9% of our palm exposure is verified deforestation free.

**F1.5b**

(F1.5b) For your disclosed commodity(ies), indicate the percentage of the production/consumption volume sourced by national and/or sub-national jurisdiction of origin.

**Forest risk commodity**
- Palm oil

**Country/Area of origin**
- Malaysia

**State or equivalent jurisdiction**
- Specify state/equivalent jurisdiction
  - Sabah

**% of total production/consumption volume**
- 24.3

**Please explain**
This location covers 24.30% of the palm oil sourced by our business out of the total consumption volume. The volume proportion is calculated by taking the standardized traceability information (Palm Oil Mill Name, Palm Oil Mill Owner, GPS Code = Industry Standard) of each palm oil raw material delivery and distributing the volume of this single delivery equally to each of the palm oil mills (GPS codes) associated with this single delivery. This approach enables the introduction of a volume-based sourcing priority classification.

**Issues considered**

- Availability of forest risk commodities
- Quality of forests risk commodities
- Impact of activity on the status of ecosystems and habitats
- Regulation
- Climate change
- Impact on water security
- Tariffs or price increases
- Loss of markets
- Leakage markets
- Brand damage related to forests risk commodities
- Corruption
- Social impacts

**Stakeholders considered**

- Customers
- Employees
- Investors
- Local communities
- NGOs
- Other forest risk commodity users/producers at a local level
- Regulators
- Suppliers

**Please explain**

The sustainability-related topics relevant for BASF are addressed by the responsible operating divisions, functional units and the regions, which assess the risks identified as being relevant according to impact and probability of occurrence. We also systematically assess opportunities and risks with effects that cannot yet be measured in monetary terms, such as reputational risks. Our suppliers are evaluated based on risk due to the size and scale of our supplier portfolio. We define relevant suppliers as those showing an elevated sustainability risk potential as identified by our risk matrices and our purchasers’ assessments. Description of each of the tools/methods: We use the Together for Sustainability (TfS) evaluation program, which is based on third-party online assessments and on-site audits and is simplified for both suppliers and TfS member companies by a globally uniform questionnaire. In addition, the service provider RepRisk provides us with ad-hoc information if any suppliers have been publicly observed in connection with negative sustainability incidents, including forest-related aspects. We also use tools and services like publicly available SPOTT data, Global Forest Watch Pro (GFW Pro) online management, external consultants and HCS Approach to create a holistic picture in order to assess forest-related risks on many different levels. One of the most significant issues considered is the violation of regulation and negative impacts on the status of ecosystems and habitats, which could lead to increased risks for other issues considered. Through our satellite monitoring approach (Palmoil.io platform by MapHubs) and our comprehensive traceability information on palm (internal company method), BASF is observing its palm supply chain for recent potential deforestation cases and bring these cases up for resolution.
with our direct supplier which connects BASF accordingly to the area of potential deforestation.

Forest risk commodity
Palm oil

Scope of value chain mapping
Own operations
Tier 1 suppliers
Other, please specify
BASF publishes the connected palm oil mills

% of total suppliers covered within selected tier(s)
96

Description of mapping process and coverage
Collaboration and dialog along the value chain is key for pursuing our ambitious goals on our journey towards responsible sourcing of palm oil. In Indonesia and Malaysia, smallholder farmers account for 40 percent of the total area of planted oil palms and as much as 33 percent of the output. This means no sustainability policy can be effective without considering smallholders as a crucial part of the value chain Sustainability certification, such as the RSPO, can be costly and difficult to achieve for smallholders. However, it is also high in demand and can provide premiums. NDPE implementation is the key success factor for a social license to operate in the palm value chain in the future. For BASF, an NDPE policy and its implementation have become a business-critical factor. Our reviewed BASF Palm Sourcing Policy addresses the requirements for protecting and preserving forests and peatland, as well as the involvement of local communities. Traceability and certification have guided the palm industry for years. But traceability to palm oil mill does not solve the palm dilemma alone it is about engaging with the right suppliers, introducing change for the better on the ground and increase transparency on the palm value chain. Therefore, we share a list of our main suppliers and the names and locations of around 1,300 mills.
The disclosed % of total suppliers covered within selected tier(s) is based on coverage of our commodity consumption volumes.

Your own production and primary processing sites: attach a list of facility names and locations (optional)

Your suppliers' production and primary processing sites: attach a list of names and locations (optional)

**F3. Risks and opportunities**

**F3.1**

(F3.1) Have you identified any inherent forests-related risks with the potential to have a substantive financial or strategic impact on your business?

<table>
<thead>
<tr>
<th>Risk identified?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Palm oil</td>
</tr>
<tr>
<td>Yes</td>
</tr>
</tbody>
</table>

**F3.1a**

(F3.1a) How does your organization define substantive financial or strategic impact on your business?

Deforestation and forest degradation are an element of BASF’s risk management, which identifies and evaluates opportunities and risks as early as possible to take appropriate measures in order to seize opportunities and minimize risks. The aim is to avoid risks that pose a threat to BASF’s continued existence and to make improved managerial decisions to create lasting value.

**Definition of substantive impact:**

We understand risk to be any event that can negatively impact the achievement of our operational or strategic goals. We define opportunities as potential successes that exceed our defined goals. A specific risk or opportunity is considered as having a substantive impact if the resulting deviation from planned earnings exceeds €10 million. We have further defined the magnitude of impact to be linked to the following net financial implications for BASF’s EBIT: High = more than €100 million, Medium = €10-100 million, Low = less than €10 million. If a new risk is identified that could have an impact on earnings of more than €10 million or bears reputational risks, it must be immediately reported to the Board of Executive Directors.

**Description of the quantifiable indicators used to define substantive impact:**

(a) Potential financial implications for BASF: Depending on the nature of the risk or opportunity, different methods for quantification are considered. In case of a clear understanding about the direction of change driven by the risk/opportunity, the effects will be quantified based on expert assessments about the potential level of change and cause-effect-relationships. If the direction
of change is unclear, i.e., the effect can be positive or negative and thus represents a volatility/uncertainty, a case-specific probability distribution over the impact range is estimated.

(b) Probability of occurrence: Financial impacts will only be considered where a risk or opportunity has a probability of occurrence of at least 1% or the potential to threaten BASF’s license to operate. The method for estimation of probability depends on the nature of the risk or opportunity. In case that statistical data about the occurrence of the risk/opportunity are available (e.g., area of illegal deforestation), such information will be the basis for calculation of likelihoods. If no such statistical relationship can be relied on (e.g., when assessing the probability of implementation of certain policy measures), likelihood will be subject to expert estimates. We classify probabilities as follows: low = less than 30%, medium = 30-70%, high = more than 70%.

Scope: The mentioned definitions and thresholds apply regardless to where in the value chain the risk/event is located, i.e., direct operations, supply chain, customers etc.

**F3.1b**

(F3.1b) For your disclosed forest risk commodity(ies), provide details of risks identified with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

**Company-specific description**

BASF offers a broad range of ingredients based on RSPO certified sustainable palm kernel oil. We mainly use Palm oil, palm kernel oil and their derivatives. The Nutrition & Care unit, which makes up approx. 8% of BASF’s total revenue processes most of the palm and palm kernel oil that we purchase. BASF has committed to source 100% RSPO certified palm and palm kernel oil by 2020 and to source 100% RSPO certified palm and palm kernel oil derivatives by 2025. As in general the years 2021, 2022, 2023 are years of commitments of that kind, also in the industry by important players - it is unclear
whether enough RSPO certified palm kernel oil will be available to serve all demands (currently the RSPO certified output is growing at a very small scale). In 2021 our overall palm exposure amounted to 462,894 metric tons, compared to 441,107 metric tons in 2020. We are expecting a growing demand for certified palm oil for our own consumption as well as for the global market demand. The risk of a limited availability of certified palm oil are twofold: physical availability as such and dramatically increased premiums to pay for securing BASF’s demand on certified palm kernel oil and its derivatives. The consequence of insufficient physical availability would be that BASF is not able to serve the demands of their customers. This goes along with increased operational costs (premiums) which might endanger the competitiveness of BASF in the market and would lead to a loss of market share.

**Timeframe**

>6 years

**Magnitude of potential impact**

Medium-high

**Likelihood**

More likely than not

**Are you able to provide a potential financial impact figure?**

Yes, an estimated range

**Potential financial impact (currency)**

**Potential financial impact figure - minimum (currency)**

0

**Potential financial impact figure - maximum (currency)**

100,000,000

**Explanation of financial**

The financial impact is taken from a scenario where the premiums for RSPO certified material increase dramatically. In addition, the lack of supporting some of our customers’ demands, due to lack of appropriate raw material is also considered in our calculation. The maximum potential financial impact figure is based on a scenario where tripling the premiums for BASF’s entire palm exposure would result in additional costs of nearly 100 Mio €.

**Primary response to risk**

Supplier diversification

**Description of response**

Broadening of our supplier base for supplying RSPO certified palm products and engaging with our supplier on long term business relations / contracts to secure BASF’s demand is an already implemented strategy and we effectively established long-term relationships with this strategy to mitigate and prevent reoccurring risks associated with the availability of certified sustainable raw materials. Effectiveness of our long-term
relationships: This targets to increase supplier intimacy and to establish BASF as a reliable and long-term partner to better anticipate supply volatility for certified commodities and strengthen our resilience to effectively meet our market demands. In addition, we are working on alternative raw material solutions which are compliant with our palm commitment.

Cost of response
20,000,000

Explanation of cost of response
Supplier diversification and long-term contracting diminished the negotiation power due to smaller volume allocation per supplier – estimation of costs of approx. 2-3 million EUR / annum. In case of overcoming supply shortage of certified material by CNO (coconut oil) – these potential costs are calculated to be 10 – 17 million EUR per annum. The sum of these main cost aspects of supplier diversification result in the estimated costs of response.

Forest risk commodity
Palm oil

Type of risk
Reputational and markets

Geographical scale
Global

Where in your value chain does the risk driver occur?
Supply chain

Primary risk driver
Other reputational and market driver, please specify
BASF not delivering on its palm commitment

Primary potential impact
Brand damage

Company-specific description
BASF has publicly committed to source 100% RSPO certified palm and palm kernel oil by 2020 and to source 100% RSPO certified palm and palm kernel oil derivatives (Fatty Alcohols, Fatty Acids, Methylesters) by 2025. A failure to meet the timelines of the commitment and subsequently to continue the sourcing of 100% RSPO certified Palm Kernel Oil beyond 2020 and of Palm Kernel Oil Derivatives beyond 2025 will be a public topic and will damage the BASF brand with potential decrease in shareholder value and loss of social license to operate in palm (potential NGO activism).

Timeframe
>6 years

Magnitude of potential impact
High

**Likelihood**

About as likely as not

**Are you able to provide a potential financial impact figure?**

No, we do not have this figure

**Potential financial impact (currency)**

**Potential financial impact figure - minimum (currency)**

**Potential financial impact figure - maximum (currency)**

**Explanation of financial**

A brand damage based on not delivering on our palm commitments could lead to a reputation loss and potentially have a high magnitude of impact. Due to the complexity of this risk and impact on a company-wide scale a single potential impact figure cannot be estimated.

**Primary response to risk**

Supplier diversification

**Description of response**

All efforts are taken to secure meeting BASFs palm commitment. In addition, potential additions to the BASF Palm commitment are evaluated which have the potential to compensate for inability to source all palm raw material 100% certified sustainable and to keep BASFs Social license to operate on Palm.

**Cost of response**

0

**Explanation of cost of response**

For the various responses to this risk a cost estimation of the response cannot be singled out and is not evaluated.

---

**Forest risk commodity**

**Type of risk**

Chronic physical

**Geographical scale**

Global

**Where in your value chain does the risk driver occur?**

Supply chain
Primary risk driver
Increased severity of extreme weather events

Primary potential impact
Supply chain disruption

Company-specific description
BASF operates one of the biggest fatty alcohol plants in the world. The raw material supply of several 100 kt of palm kernel oil (and Coconut oil) to Reisholz (Düsseldorf) is implemented via barging along the river Rhine. Given the volume size to be transported and the involved transportation costs this is by far the most efficient way of transport. In the recent years we experienced increased frequency of low water levels along the river Rhine – being partially extremely low. In case of low water in the river Rhine the transportation costs are rising the lower the water level gets. At the same time the loading capacity of the Rhine barges decreases the lower the water level gets (down to 10% of their loading capacity) and at a certain point of low water level the barges cannot operate at all. Already at the point where the barges are still operating but with substantially decreased capacity supply chain disruptions are present as no other logistic means is currently possible to compensate here. This can go as far as a shutdown of operations as the raw material feed cannot be replenished in time.

Timeframe
>6 years

Magnitude of potential impact
Medium-high

Likelihood
Likely

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact (currency)

Potential financial impact figure - minimum (currency)
0

Potential financial impact figure - maximum (currency)
50,000,000

Explanation of financial
Low water levels in the Rhine increase the transportation costs for the barging of the raw materials. In case of a supply disruption the plant operations need to be reduced and less customer orders can be fulfilled. The financial scenario now tries to evaluate the impact of a period with increased transportation costs, reduced operations with a subsequent closure of the fatty alcohol plant for four weeks together with additional external raw material costs to cover production beyond the fatty alcohol plant as much as possible.
Primary response to risk
Other, please specify
Diversification of transportation means for Lauric supply into Düsseldorf

Description of response
In the course of diversification of transportation means of Laurics into Düsseldorf, BASF has increased the possibilities for deliveries of tank trucks and is evaluating other more efficient means of securing the Lauric oil supply into Düsseldorf.

Cost of response
12,000,000

Explanation of cost of response
Estimated costs of up to 12 million EUR are based on investments in additional unloading capacities for several different transportation means and their connection to the production plant and storage facilities.

Direct operation

Primary forests-related opportunity
Increased demand for certified materials

Company-specific description & strategy to realize opportunity
With estimates of palm oil being present in up to 70% of cosmetic products and over 50% of all supermarket products, palm oil is both extremely important to the supply chain and increasingly risky due to the potential for loss of consumer acceptance. BASF offers a broad range of ingredients based on RSPO certified sustainable palm kernel oil.
We mainly use palm oil, palm kernel oil and their derivatives. The Nutrition & Care unit, which makes up approx. 8% of BASF’s total revenue processes most of the palm and palm kernel oil that we purchase. Although not all consumers are currently aware of palm oil, those that are aware view it in a negative light, associating it with negative environmental impacts. As one of the leading global suppliers for personal care, home care, industrial & institutional cleaning, and technical applications as well as food performance and health ingredients, BASF is highly exposed to this risk. However, its position also provides an opportunity to benefit if it capitalizes on the opportunity to solidify its reputation as a supplier, that supports the sustainability strategy of its customers with ingredients that are ecologically sourced. In 2014, supported by the agency Futureye, BASF started targeting for a social and economic license to operate linked to palm. Strategy/Actions: The discussion led to a more comprehensive and shared understanding of the issues across the whole supply chain, including suppliers, manufacturers, retailers & non-governmental organizations. Our priority is to help our customers deal with the complexity of oleoderivatives and gain a better understanding on how to approach physical transformation towards sustainable palm. BASF has been continuously moving towards a comprehensive global product range that will allow consumer goods manufacturers to develop value added formulations that meet increasing demand for ingredients that are certified sustainable. To speed up that process, we have initiated a major shift of our specialty portfolio in 2018 and offer palm-based specialty ingredients for the personal care market exclusively RSPO certified.

With this ‘Time for Change’ initiative, we broaden our portfolio offerings on certified sustainable and we aim to provide our customers the ability to meet own commitments. By 2020 we have achieved our goal to only source RSPO certified palm and palm kernel oil.

**Type of opportunity**
Efficiency

**Where in your value chain does the opportunity occur?**
Supply chain

**Primary forests-related opportunity**
Increased shareholder value

**Company-specific description & strategy to realize opportunity**
With the “We create chemistry” strategy, BASF has set itself ambitious goals. We want to contribute to a world that provides a viable future with enhanced quality of life for everyone and have embedded this into our corporate purpose: “We create chemistry for a sustainable future.” We do so by creating chemistry for our customers and society and by making the best use of available resources. To ensure sustainability and, thus, the interplay between ecological, economic and social issues, an ongoing dialog and cooperation are essential. We engage intensively with our stakeholders at all levels of the supply chain to understand their needs and help them achieve their targets: suppliers, customers, civil society, associations and employees. As a founding member of the U.N. Global Compact, we support the implementation of the United Nations’ Sustainable Development Goals with our social commitment around the world. For the palm value chain, this means we work closely with the companies we buy our raw materials from and with our customers. Beyond this, we support smallholders as an important link within the value chain. With the end consumer in view, we address the consequences of using and selling products based on palm and palm kernel oil. More and more investors want to invest in stocks of companies that conduct their business in accordance with the principle of sustainable development. This means that investment decisions are based on environmental and social aspects as well as economic performance. BASF shares are particularly attractive for such investors.

**Estimated timeframe for realization**
>6 years

**Magnitude of potential impact**

F4.4

(F4.4) Did your organization include information about its response to forests-related risks in its most recent mainstream financial report?

Yes (you may attach the report – this is optional)

☑ BASF includes forest-related information in the BASF Online Report 2021: https://report.basf.com/2021/en/. Forest- and palm-related information are included in various chapters, e.g., Biodiversity, Sustainable Investment & Raw Materials

F4.5

(F4.5) Does your organization have a policy that includes forests-related issues?

Yes, we have a documented forests policy that is publicly available

F4.5a

(F4.5a) Select the options to describe the scope and content of your policy.

**Forest risk commodity**

*Palm oil*

**Criteria**

- No conversion of natural ecosystems
- Zero gross deforestation/ no deforestation
- No new development on peat regardless of depth
- Best management practices for existing cultivation on peat
- Restoration and compensation to address past deforestation and conversion
- Avoidance of negative impacts on threatened and protected species and habitats
- No land clearance by burning or clearcutting
- No conversion of High Conservation Value areas
- No conversion of High Carbon Stock forests
- Secure Free, Prior and Informed Consent (FPIC) of indigenous people and local communities
- Operations are in accordance with the UN Declaration on the Rights of Indigenous Peoples
- Promotion of gender equality and women’s empowerment
- Adoption of the UN International Labour Organization principles
- Resolution of complaints and conflicts through an open, transparent and consultative process
- Facilitate the inclusion of smallholders into the supply chain
- No sourcing of illegally produced and/or traded forest risk commodities
- Restricting the sourcing and/or trade of forest risk commodities to credible certified sources
- Recognition of legal and customary land tenure rights

**Operational coverage**

Direct operations and supply chain

**% of total production/ consumption covered by commitment**

**Cutoff date**

2005

**Commitment target date**

2020
Please explain

When the Roundtable of Sustainable Palm Oil was set up in April 2004, BASF envisioned it as a milestone for the palm oil world. Consequently, BASF joined the RSPO in November 2004, very soon after the start. The BASF Palm Commitment was first published in 2011 and extended in 2015 to foster a market transformation towards sustainable palm oil production and usage. Key elements include a sourcing policy for oil palm-derived products that incorporates forest and peat conservation, as well as requirements for a free, prior-informed-consent, social impact assessment, human and labor rights. We have committed ourselves to foster sustainable palm by procuring all oils only from RSPO certified sources by 2020 and expanding our oil commitments to significant intermediates based on palm oil and palm kernel by 2025. BASF supports initiatives to reflect integrated land use planning for oil palm development, including the conservation of high carbon stock and peatlands. We have integrated additional forest conservation requirements regarding these land types into our BASF Palm Sourcing Policy (as defined by the High Carbon Stock Approach). Additionally, we have incorporated requirements for a Free, Prior Informed Consent (FPIC) process as well as labor and human rights into our Palm Sourcing Policy. As part of its strategy, BASF has initiated its ‘Time for Change’ initiative in 2018 to offer its palm-based specialties exclusively as RSPO certified sustainable. Today, our experts continue to engage with numerous stakeholders along the value chain. A No-deforestation, No-peat and No-exploitation (NDPE) policy and its implementation have become a business-critical factor for BASF. BASF recognizes the importance of protecting the world’s forests for the well-being of the environment and society. In June 2020, BASF introduced its Forest Protection Policy. The company focuses on raw materials supply chains, own operations, as well as products in the combat against further deforestation. The approach encompasses primary forests and areas of High Conversation Value (HCV), as well as High Carbon Stock (HCS) forests and peatlands.

Example of actions taken in the last year to meet the commitments “No conversion of natural ecosystems” & “Zero gross deforestation / no deforestation”: In 2021 we applied our satellite monitoring approach (Palmoil.io platform by MapHubs) in Kerdau at a Palm Oil Mill in Malaysia (Pahang), where our satellite monitoring indicated potential deforestation near by the palm oil mill. In the discussions with our supplier proof was delivered that the palm oil mill supply sched is not connected to the area of potential deforestation.

Example (including locations) of actions taken in the last year to meet the commitment “Secure Free, Prior and Informed Consent (FPIC)”: In 2021 we continued our target to source RSPO certified palm and palm kernel oil and increased our RSPO certified consumption by more than 4%. The RSPO certification is closely linked to our FPIC commitment, as the RSPO principles and criteria state to respect community and human rights (RSPO Principle 4) and include that the use of the land for oil palm does not diminish the legal, customary or user rights of other users without their Free, Prior and Informed Consent.

Example (including locations) of actions taken in the last year to meet the commitment “Restoration and compensation to address past deforestation and/or conversion”: BASF is supporting the Mata Viva initiative in Brazil to protect water quality, conserve soil, and create areas to preserve native vegetation and wildlife. Annual monitoring occurs in the areas recovered in the BASF sites, covering about 170 hectares in 2021.
F5. Business strategy

| Company-specific description of the long-term business strategy: We see it as our responsibility to work intensively with the companies we buy our raw materials from, to engage more closely with the palm supply chain from the smallholder to the end consumer. To reach our long-term objectives and commitments BASF supports initiatives to reflect integrated land use planning for oil palm development, including the conservation of high carbon stock and peatlands. We have integrated additional forest conservation requirements regarding these land types into our BASF Palm Sourcing Policy and our Group’s Position on Forest Protection with actions for our supply chains, operations & products. As part of our strategic business plan a continuous stakeholder engagement is extremely important to BASF. We will continue to work collaboratively with value chain partners, governments and civil society to conserve forests and to drive our ambition stated in our group-wide Position on Forest Protection. BASF partners with a variety of organizations, and we are looking to partner with additional relevant stakeholder groups and organizations to raise and increase awareness, drive the necessary market transformation and to achieve impact on the ground.  
An example of forests-related actions taken that align with the strategic business plan aspect: BASF has initiated its ‘Time for Change’ initiative in 2018 to offer its palm-based specialties exclusively as RSPO certified sustainable. In July 2021, we published our fifth progress report – the BASF Palm Progress Report – for greater transparency in the value chain. In order to better understand and quantify the environmental impacts of our commitments and objectives, we published our product carbon footprint (PCF) for sourcing certified sustainable palm kernel oil. Compared to conventionally sourcing, BASF saves more than 300,000 metric tons CO2. RSPO-certified production of palm kernel oil shows around 36 percent lower global warming impact than non-certified production. Our strategy is key for our long-term business objectives the commitment of protecting the world’s
| Financial planning | Yes, forests-related issues are integrated | 11-15 |

Company-specific description of the long-term business objectives/strategy for achieving long-term financial planning: BASF is one of the leading global suppliers for personal care, home care, industrial & institutional cleaning, and technical applications as well as for food performance and health ingredients. A significant share of our products is based on renewable raw materials, of which a substantial ratio is oil palm based. We are one of the major users of palm kernel oil and its derivatives and to a lesser extent palm oil. We process those products into ingredients for the above-mentioned industries. BASF offers a very broad range of ingredients based on RSPO-certified sustainable palm kernel oil in accordance with its principles and criteria. Since launching certified ingredients in 2012, BASF has been continuously moving toward a comprehensive global product range that will allow consumer goods manufacturers to develop value added formulations that meet increasing demand for ingredients that are certified as sustainable. Transferrably classifying our products on the basis of their contribution to sustainability by means of the Sustainable Solution Steering methodology enables us to systematically improve them. 

An example of forests-related actions taken that align with the strategic business plan aspect: 

Our Accelerator products, which also contain oil palm raw materials, or RSPO certified oil palm raw materials make a substantial sustainability contribution in the value chain. Based on our corporate strategy, we have therefore set ourselves a global target: we will considerably increase the sales of Accelerator solutions to €22 billion by 2025 (2019: €15 billion). This target reflects our strong commitment to further drive innovation beyond today’s state of the art. We have built an expert team to engage with stakeholders and implement our Palm Commitment. Our experts continue to engage with numerous stakeholders along the value chain, including our stakeholders who serve as important ambassadors for sustainable palm to create transparency and collaborate solutions. In order to fulfill our company’s purpose and long-term deforestation commitments as described above, we have to outline necessary actions, assets, and
resources that go beyond our short and medium-term financial plan (consistent with the long-term time horizon).

F6. Implementation

F6.1

(F6.1) Did you have any timebound and quantifiable targets for increasing sustainable production and/or consumption of your disclosed commodity(ies) that were active during the reporting year?

Yes

F6.1a

(F6.1a) Provide details of your timebound and quantifiable target(s) for increasing sustainable production and/or consumption of the disclosed commodity(ies), and progress made.

  - Palm oil

- **Type of target**
  - Third-party certification

- **Description of target**
  
  Time bound target of sourcing all palm- and palm kernel oil derivatives (e.g., Fatty Acids, Fatty Alcohols, Methyl ester) to 100% as RSPO certified sustainable by 2025. By this BASF will drive even further the market transformation towards certified sustainable oil palm value chains. BASF offers since 2012 a broad range of MB (Mass Balance) palm- and palm kernel oil-based ingredients for the Personal Care industry globally. BASF uses mainly palm kernel oil or palm kernel oil-based derivatives. In 2018, BASF has implemented a major portfolio shift towards sustainable palm and offers palm-based specialties for the cosmetics industry exclusively as RSPO certified. We have switched about 330 palm-based products to ‘Mass Balance’ standard globally. This helps our customers to meet their obligations to customers, consumers, and stakeholders. To fully complete the switch on a global level, BASF discusses with all its stakeholders to expand the demand for RSPO Mass Balance certified products.

Please explain
Traceability and certification have guided the palm industry for years. But traceability to palm oil mill does not solve the palm dilemma alone – it is about engaging with the right suppliers, introducing change for the better on the ground and increase transparency on the palm value chain. Therefore, we share a list of our main suppliers and the names and locations of more than 1,300 mills. BASF has increased its efforts on traceability by renewing our palm traceability twice a year and by focusing on additional means to further investigate our palm supply chain like satellite monitoring and systematic reporting on the NDPE implementation of our suppliers. We are convinced that the outcome of this investigations together with our continued commitment to certified sustainable raw materials, and our engagement for and within the HCSA will drive change on the ground for the better – for our customers and stakeholders.
Target reference number
Target 3

Please explain
In order to enhance sustainability within the supply chain, the chemical companies BASF, Bayer, Evonik Industries, Henkel, Lanxess and Solvay joined forces in 2011 for the Together for Sustainability (TfS) initiative. Meanwhile 37 companies from all over the world are joining the initiative. The initiative is based on good practices and builds on
established principles – such as the United Nations Global Compact (UNGC) and the Responsible Care Global Charter as well as standards developed by the International Labor Organization (ILO), the International Organization for Standardization (ISO), Social Accountability International (SAI) and others.

TfS develops and implements a global supplier engagement programme to assess and improve sustainability practices within the supply chain of companies from the chemical sector. This enables TfS members to measure the Environmental, Labour and Human Rights, Ethical and Sustainable Procurement performance of their suppliers. The ultimate purpose is to drive and deliver tangible and measurable improvements of both suppliers and TfS member companies. To achieve this, TfS conducts Assessments and Audits. These help to create transparency in the sustainability performance of chemical companies and their suppliers, providing a solid basis for collaboration among members. Tangible improvements are facilitated by the Corrective Action Plan (CAP), providing an overview of outstanding actions to improve performance. Data mining of TfS Assessments and TfS Audits enables TfS to focus on those areas where the biggest improvements can be made.

Target 4

**Forest risk commodity**

Palm oil

**Type of target**

Third-party certification

**Description of target**

Our initial third-party certification target with a 2015 start year and 2020 target year to source only sustainable palm and palm kernel oil (RSPO certified) was achieved and turned into a yearly re-occurring target. By 2021 – source only sustainable palm and palm kernel oil RSPO certified sustainable as far as available on the market. We are expanding our offering of certified sustainable products in accordance with the RSPO’s Mass Balance supply chain model. In 2018, we have taken the decision to drive sustainable palm with a major portfolio shift. We will only offer palm-based ingredients for the personal care market that are certified as sustainable. This helps our customers to meet their obligations to customers, consumers and stakeholders. To fully complete the switch on a global level, BASF discusses with all its stakeholders to expand the demand for RSPO Mass Balance certified products. This is an important milestone for the cosmetics industry.

Please explain
Our initial third-party certification target with a 2015 start year and 2020 target year to source only sustainable palm and palm kernel oil (RSPO certified) was achieved and turned into a yearly re-occurring target. When the Roundtable of Sustainable Palm Oil was set up in April 2004, BASF envisioned it as a milestone for the palm oil world. Consequently, BASF joined the RSPO in November 2004, very soon after the start. Since then, the RSPO has had a remarkable journey towards the sustainable certified production of palm and palm kernel oil and we have actively participated in consultations within the organization, most notably in the subgroup oleochemicals and derivatives under the RSPO working group Trade & Traceability.

How the company is planning to meet this target: The BASF Palm Commitment was first published in 2011 and extended in 2015 to foster a market transformation towards sustainable palm oil production and usage. Key elements include a sourcing policy for oil palm-derived products that incorporates forest and peat conservation as well as requirements for a free, prior-informed-consent, social impact assessment, human and labor rights. We have committed ourselves to foster sustainable palm by procuring all oils only from RSPO certified sources by 2021 and expanding our oil commitments to significant intermediates based on palm oil and palm kernel by 2025. We support progress in the palm oil sector by moving the supply chain toward certified products. In this way, we take part in global palm initiatives and in networks with various stakeholders in order to drive change for oleo-derivatives. By the end of 2021 we have achieved our 2021 goal to only source RSPO certified palm and palm kernel oil (excl. significant intermediates based on palm oil and palm kernel oil) and will continue this yearly target for 2022.

Target reference number
Target 5
Forest risk commodity
Palm oil

Type of target
Engagement with smallholders

Description of target
In Indonesia and Malaysia, smallholder farmers account for 40 percent of the total area of planted oil palms and as much as 33 percent of the output. This means no sustainability policy can be effective without considering smallholders as a crucial part of the value chain. Sustainability certification, such as the RSPO, can be costly and difficult to achieve for smallholders. However, it is also high in demand and can provide premiums and thus improve the livelihood of smallholders. This is why BASF is engaging in appropriate smallholder projects on the ground.

Please explain
In 2018, BASF and The Estée Lauder Companies partnered with the civil society organization Solidaridad Network to promote sustainable oil palm production in the district of Waykanan, Lampung, Indonesia. Despite the economic benefits generated by the cultivation of oil palm, farmers still facing various constraints in producing high palm oil yields and high quality FFB's in a sustainable manner due to lack of knowledge on sustainable agricultural practices. The projects offer continuous education and technical support on implementing and maintaining sustainable palm oil practices. 1,000
independent smallholder farmers are supported to improve their livelihood and their sustainable production of palm and palm kernel oil. The project's target is at least one-third of the supported smallholder farmers become certified according to the Smallholder Standard of RSPO at the end of three years. The project partners are collaborating with the Indonesian government to foster a sustainable palm oil production supply chain in Lampung free from deforestation and competitive in the global market, while increasing the social and economic benefits for farmers.

<tr>
<td></td>
<td>The physical market transformation based on the RSPO certification is an important element on our journey toward sustainable palm. In addition, traceability is the tool which helps companies along the palm oil supply chain to identify the origin of the oil sourced. In general, the traceability system used is set up by compiling all traceability information from all palm oil raw material supply for BASF (a list of palm oil mills for each supply) – this results in general in the overall global BASF palm oil mill list. In addition, BASF introduces a volume-based sourcing priority classification. For this, the commodity volume proportion per palm oil mill is calculated by taking the standardized traceability information (Palm Oil Mill Name, Palm Oil Mill Owner, GPS Code = Industry Standard) of each palm oil raw material delivery and distributing the volume of this single delivery equally to each of the palm oil mills (GPS codes) associated with this single delivery. This approach enables the introduction of a volume-based sourcing priority classification.</td>

F6.3a

(F6.3a) Provide a detailed breakdown of the volume and percentage of your production and/or consumption by certification scheme.

Forest risk commodity
- Palm oil

Third-party certification scheme
- RSPO Mass Balance

Chain-of-custody model used

% of total production/consumption volume certified
- 55.95

Form of commodity
- Crude palm oil (CPO)
- Crude palm kernel oil (CPKO)
- Palm oil derivatives
- Palm kernel oil derivatives

Volume of production/consumption certified
- 258,970

Metric for volume
- Metric tons

Is this certified by more than one scheme?
- No

Please explain
Since launching certified ingredients in 2012, BASF has been continuously moving toward a comprehensive global product range that will allow consumer goods manufacturers to develop value added formulations that meet increasing certification demand. To speed up that process, we have initiated a major shift of our specialty portfolio in 2018 and offer palm-based specialty ingredients for the personal care market.
Actions taken in the reporting year: In 2021 we have also significantly expanded our portfolio of RSPO MB certified ingredients for the Home Care and I&I (HCI) market in Europe. In the past, our portfolio of RSPO certified sustainable surfactants comprised 29 products. In 2021 we have been able to significantly increase the number of surfactants for HCI applications to more than 150 products, which brings us yet another step further on our journey towards sustainable palm.

BASF reached an important milestone toward sustainable palm by fulfilling the part of its Palm Commitment to procure palm (kernel) oils exclusively from sources physically certified by the RSPO by 2020. Last year, the company purchased 258,970 metric tons of certified sustainable palm (kernel) oil and its respective derivatives. This comprises that 100% of BASF’s total palm (kernel) oil volume has been sourced as RSPO certified. BASF also made further progress in developing transparent supply chains: the company was able to trace 96% of its global palm footprint – 462,894 metric tons – back to oil mill level. BASF is now focusing on its next goal: to expand the commitment to those significant intermediates which are based on palm oil and palm kernel oil by 2025. BASF also supports the RSPO Segregated certification by purchasing some RSPO Segregated volumes. We downgrade these Segregated volumes and offer Mass Balance certified sustainable products. The RSPO Mass balance certification scheme represents the greatest certified volume for our palm-based products.

F6.4

(F6.4) For your disclosed commodity(ies), do you have a system to control, monitor, or verify compliance with no conversion and/or no deforestation commitments?

<table>
<thead>
<tr>
<th>A system to control, monitor or verify compliance</th>

Forest risk commodity
Palm oil

Operational coverage
Supply chain

Description of control systems
Description of the monitoring approaches selected:
- Geospatial monitoring: We monitor our supply chain and the supply chain of our suppliers via satellite monitoring. We have access to risk dashboards for major palm growers, traders, and buyers in respect of deforestation, human rights violations, water
pollution, CBP withhold release order risk, land conflicts and corruption.
- Other: The NDPE Implementation Reporting Framework is a reporting tool that provides a shared and consistent view of progress towards NDPE commitments and implementation on the ground across the full supply base of companies throughout the supply chain. Information on actions being undertaken to deliver NDPE commitments is collected.
- Third-party verification: With the Together for Sustainability program, risk matrices help us identify suppliers with a high sustainability risk potential based on country and product risks.

**Monitoring and verification approach**

- Geospatial monitoring tool
- Third-party verification
- Other, please specify
  - NDPE IRF

**% of total volume in compliance**
81-90%

**% of total suppliers in compliance**
81-90%

**Response to supplier non-compliance**
- Retain & engage
- Suspend & engage
- Exclude

**Procedures to address and resolve non-compliance with suppliers**
- Developing time-bound targets and milestones to bring suppliers back into compliance
- Assessing the efficacy and efforts of non-compliant supplier actions through consistent and quantified metrics
- Re-integrating suppliers back into supply chain based on the successful and verifiable completion of activities

**Please explain**
BASF response to non-compliance: BASF is monitoring public campaigns and RSPO case tracker on a monthly basis. For every grievance received by BASF, the credibility and validity of the grievance needs to be evaluated in order to determine whether to pursue the grievance with suppliers. When grievance is addressed, BASF will check if sufficient information is provided in grievance trackers. If information is not sufficient, BASF will follow-up with supplier to address the gaps and may need to support them with identifying experts, root causes and actions to take. Once an action plan is provided, BASF will evaluate if it is aligned with its expectations. Where further clarifications are required or where action/engagement plans are not considered adequate, BASF will follow up. If the action plan is not approved by relevant parties, BASF needs to assess whether it is an important supplier and decide whether to undertake further engagement to ensure resolution process progresses or to engage direct suppliers to suspend or shift volumes to other third-party suppliers or to BASF itself and suspend or shift volumes from the direct supplier. If the action plan is
approved, BASF will inform grievance raiser, and continue to monitor, with the possibility
of additional engagement. Percentage of total volume in compliance is based on the
total volumes already certified and traceable. This does not imply that the remaining
percentage of consumption volume is not in compliance.

F6.6

(F6.6) For your disclosed commodity(ies), indicate if you assess your own compliance
and/or the compliance of your suppliers with forest regulations and/or mandatory
standards.

<table>
<thead>
<tr>
<th>Assess legal compliance with forest regulations</th>

<tr>
<td>Palm oil</td>
</tr>
</tbody>
</table>

F6.6a

(F6.6a) For your disclosed commodity(ies), indicate how you ensure legal compliance
with forest regulations and/or mandatory standards.

Palm oil

Procedure to ensure legal compliance

Procedure to ensure legal compliance: The palm raw materials BASF is sourcing
comply with RSPO, ISPO and MSPO standards which include regular audits to renew
compliance with these standards. These standards (among other) ensure that
agricultural standards set by the government and standard specific requirements are
kept and controlled. ISPO is mandatory for all oil palm growers operating in Indonesia.
Because of its national reach, ISPO has the potential to improve the entire Indonesian
plantation industry. The MSPO aligns the management of palm oil production with many
existing national laws and regulations. The standard was launched in order to help small
and mid-range growers, who could not afford RSPO certification, to operate sustainably.
RSPO is the main certification standard for the use of oil palm and its fractions. It
requires that companies abide by national laws and requirements and in some instances
go far beyond what national law dictates.

Methods and/or tools used: The NDPE Implementation Reporting Framework is a
reporting tool that provides a shared and consistent view of progress towards NDPE
commitments and implementation on the ground across the full supply base of
companies throughout the supply chain. The NDPE IRF is aggregating information on
performance with NDPE across the whole production base supplying a refinery or
(further down the supply chain) a user of palm oil. Currently the information is collected
and analysed for mills but in future can be for FFB supply to a mill.

With the Together for Sustainability program, risk matrices help us identify suppliers with
a high sustainability risk potential based on country and product risks. Using this risk
analysis and other evaluations, we audit raw material supplier sites on sustainability
standards and initiate sustainability assessments through an external provider.

The sum of our consumption volumes sourced from other forest risk countries combined
apart from Malaysia and Indonesia make up approx. 1.6% of our total consumption
volume sourced. Of these 1.6% the majority (+85%) are RSPO certified volumes.
Methods/tools used to assure compliance, such as the Together for Sustainability (TfS) supplier audit scheme and NDPE IRF profiles are also not supplier or country exclusive and are potentially functioning to ensure compliance across every country in our palm supply chain.

<td>No palm sustainability progress can be effective without considering smallholders as a crucial part of the palm value chain. Smallholder farmers produce around 40 percent of the world’s palm oil; their families depend on palm oil for their livelihood. Sustainability certification, such as the RSPO, can be costly and difficult to achieve for smallholders. However, it is also high in demand and can provide...</td>
</tr>
</tbody>
</table>
premiums. Description of the main strategy of engagement: As the connecting link between suppliers of palm kernel oil and our customers, smallholder inclusion is one pillar of our palm commitment. Since 2016, BASF has been collaborating with Henkel and the Solidaridad civil society organization to improve the livelihoods of palm oil smallholders in West Kalimantan, Indonesia. The project was implemented by Solidaridad in cooperation with Credit Union Keling Kumang (CUKK), a farming cooperative that unites more than 180,000 smallholder farmers in the region. The project aims to enhance the living conditions of the people in the farming areas by improving agricultural practices, increasing yields and helping to preserve forests. Through train the trainer already 8,600 farmers could be reached. Participants see their yield increase and spend less on agricultural inputs - a win-win situation for the farmers and the environment. This project has been finalized in 2019. In a second continuous project BASF (ongoing in 2021), The Estee Lauder Companies and the Roundtable on Sustainable Palm Oil, are
partnering with Solidaridad to promote sustainable palm oil and palm derivatives production in the district of Waykanan, Lampung, Indonesia. The project supports 1,000 independent Indonesian smallholder farmers to improve their livelihoods and their sustainable production of palm oil and palm kernel oil. It offers continuous education and technical support on implementing and maintaining sustainable palm oil practices. The project's target is that at least one-third of the supported smallholder farmers become certified according to the Smallholder Standard of RSPO at the end of three years.

F6.8

(F6.8) Are you working with your direct suppliers to support and improve their capacity to comply with your forests-related policies, commitments, and other requirements?

<table>

<td>Main strategy: Our partnerships with suppliers are based on mutual value creation, as well as a reliable supply of raw materials, technical goods and services at competitive prices. We work together in an open and transparent way to generate long-term benefits for both sides. In doing so, we create value.</td>
</tr>
<tr>
<td>supply chain mapping tool</td>
<td>added that goes above and beyond procurement alone. Number of direct suppliers engaged: Our more than 75,000 Tier 1 suppliers of which are approx. 300 involved in our palm value chain play a significant role in value creation at our company. We work in long-term partnership with companies from different industries around the world. Due to the size and scale of our supplier portfolio, our suppliers are evaluated based on risk, including both country and industry-specific risks. We actively promote sustainability in the supply chain and have set ourselves ambitious targets for this: By 2025, we aim to have conducted sustainability evaluations for 90% of the BASF Group’s relevant spend and will develop action plans where improvement is necessary. We will work towards having 80% of suppliers improve their sustainability performance upon re-evaluation. Example of direct supplier engagement activities completed in the last reporting year: In 2021 we have requested NDPE Implementation Reporting Framework (IRF) profiles from our palm suppliers. These profiles serve as a tool designed to understand and track progress in delivering NDPE commitments in our supply chain. We have requested IRF profiles from approx. 96% of our direct palm supplier base in 2021.</td>

<td>Despite the economic benefits generated by the palm oil sector, farmers in Lampung are still facing various constraints in producing high palm oil yields sustainably. Firstly, smallholder owned plantations generally have lower productivity and FFB quality, leading to lower prices and oil extraction rates at the mill. Secondly, smallholders often lack knowledge on sustainable agricultural practices, which are crucial for their plantation and environmental conservation. Thirdly, there is a lack of extension services which are focused on good agricultural practices as well as</td>
</tr>
</tbody>
</table>
| Risk of deforestation/conversion | sustainability issues. Finally, there is a limited presence of non-governmental organizations and/or civil society organizations directly working with smallholders on sustainable agricultural practices. Through this project – Enhancing Indonesian Palm Oil Smallholders to Improve Sustainable Palm Oil Production – Solidaridad and BWI seek to support smallholders in facing above mentioned problems, to improve their yields sustainably, ensure higher incomes and ensure sustainable market linkages. Project key objectives:

- Smallholder group’s organizational management and performance are well managed to help its members implement and maintain sustainable practices
- Increase smallholders’ productivity through implementation of Good Agriculture Practices and sustainable principles on palm oil production on farm level
- Smallholders attain RSPO certification

One or more local CPO mills support the smallholder group for long term sustainable market linkages. The implementation of the project is supported by Solidaridad’s team in Lampung, Sumatra. To run and manage the project, some important stakeholders will be involved, such as local smallholders’ organization KTNA (Kontak Tani Nelayan Andalan) and the Agriculture Office of Waykanan District. Their contribution will strengthen the project and will help the project to achieve its objectives. Related to the project mechanism, the Solidaridad team and its local partner, Business Watch Indonesia, will run the project activities with contributions and support from the local government, expert consultants as well as private sector representatives through ongoing mill engagement. To distribute the information, trained smallholders together with the ICS team members will conduct Farmer Field School activities to reach up to 1,000 smallholders by the end of the project. Solidaridad will conduct regular monitoring and evaluation to manage the project. |

Name of jurisdiction or landscape area
Sumatra, Lampung, WayKanan District

Is the landscape defined by administrative boundaries of sub-national governments and does the approach have active government involvement?
Yes, the landscape is defined by administrative boundaries and the approach has active government involvement

Brief description of landscape/ jurisdicalional approach
Key objectives of the project are as follows:
● Smallholder group's organizational management and performance are well managed to help its members implement and maintain sustainable practices.
● Increase smallholders’ productivity through implementation of Good Agriculture Practices (GAP) and sustainable principles on palm oil production on farm level
● Smallholders attain RSPO certification
● One or more local CPO mills support the smallholder group for long term sustainable market linkages.
The implementation of the project is supported by Solidaridad’s team in Lampung, Sumatra. To run and manage the project, some important stakeholders will be involved, such as: local smallholders’ organization KTNA (Kontak Tani Nelayan Andalan) and the Agriculture Office of WayKanan District. Their contribution will strengthen the project and will help the project to achieve its objectives. Related to the project mechanism, the Solidaridad team and its local partner, Business Watch Indonesia, will run the project activities with contributions and support from the local government, expert consultants (for specific issues) as well as private sector representatives through ongoing mill engagement.

Forest risk commodities relevant to this landscape/jurisdictional approach
Palm oil

Type of engagement
Funder: Provides full or partial financial support

Description of engagement
BASF is participating in the project “Enhancing Indonesian Palm Oil Smallholders to Improve Sustainable Palm Oil Production,” implemented by Solidaridad, in cooperation with Business Watch Indonesia, in Lampung, Indonesia. We support the project in cash and/or in kind (program support, knowledge sharing, procurement, marketing & communication).

Goals supported by engagement
Decreased ecosystem degradation rate
Avoided deforestation/conversion of other natural ecosystems
Implementation of livelihood activities/practices that reduce pressure on forests
Greater smallholder inclusion
Increased adoption of sustainable production practices
Increased uptake of certification
Improved productivity
Improved soil health
Improved water management practices
Increased adoption of sustainable production practices

**Company actions supporting approach**
- Financially support multi-stakeholder entity leading the initiative
- Provide information and training on best agricultural management practices
- Support uptake of certification
- Support producers, producer groups, and primary processors to improve agricultural practices and technologies

**Implementation partner(s)**
- Solidaridad, Business Watch (will run the project activities with contributions and support from the local government, expert consultants), local smallholders’ organization KTNA (Kontak Tani Nelayan Andalan) and the Agriculture Office of Waykanan District.

**Engagement start year**
2,018

**Engagement end year**
Please specify
2022

**Total investment over the project period (currency)**

**Details of your investment**

**Type of assessment framework**
- No assessment framework in place

**Is progress monitored and publicly reported on?**
- Yes, progress is monitored and publicly reported on

**State the achievements of your engagement so far, and how progress is monitored**
- 56% of the independent smallholders’ farmers completed farmers field school.
- 450 independent smallholders’ farmers selected to advance to the certification process. Further validation and assessment including social and environmental impacts carried out to comply the certification documents according to RSPO guidelines.
- Nursery demo-plot arranged to assist farmers in obtaining direct practical lessons in good seedlings handling and management.
- Memorandum of understanding signed with Waykanan government

**F6.11**

(F6.11) Do you participate in any other external activities and/or initiatives to promote the implementation of your forests-related policies and commitments?
Forest risk commodity

Polish Coalition for Sustainable Palm Oil (PKZOP) & NDPE IRF

Please explain
BASF takes part in global palm initiatives and in networks with various stakeholders in order to drive change towards certification. BASF became a member of the Roundtable on Sustainable Palm Oil (RSPO) in 2004. Since then, we have actively participated in consultations within the organization, most notably in the subgroup oleochemicals and derivatives under the RSPO working group Trade & Traceability. In order to leverage industry activities to stop deforestation, BASF became a member of the High Carbon Stock (HCS) Steering Group in 2016 and has since integrated the criteria of the HCS Approach into our Palm Sourcing Policy. BASF stepped up its commitment to certified sustainable oil palm products in the German, Austrian and Swiss markets by joining the Forum for Sustainable Palm Oil (FONAP) in 2017 as a manufacturer of oleo derivatives (category “Supporter”). In 2019, BASF signed together with other eleven founding members the Declaration of "Polish Coalition for Sustainable Palm Oil (PKZOP)". The PKZOP (officially known Polskiej Koalicji ds. Zrównoważonego Oleju Palmowego) is an independent Coalition and aimed at achieving 100% sustainable palm oil in Poland by 2023. It consists of twelve non-profit and non-governmental organizations, certification agencies, food and beverage, cosmetics, and chemical companies in the country. BASF is an active member of the NDPE Implementation Reporting Framework. NDPE IRF is a reporting tool designed to help companies to systematically understand and track progress in delivering NDPE commitments in their supply chains. Having a consistent framework for reporting on these activities allows individual companies and the industry collectively to:
• Understand what is required to deliver NDPE commitments
• Monitor progress
• Identify gaps
• Drive improvement

Project reference
Project 1

Project type
Reforestation

Primary motivation
Voluntary

Description of project
In 1984, BASF established the Mata Viva® initiative in Brazil to protect water quality, conserve soil, and create areas to preserve native vegetation and wildlife. The team’s first major achievement was to restore 128 hectares of forest along the Paraiba do Sul River, near the company’s South American chemical complex at Guaratinguetá. Over the years, the initiative restored more than 750 hectares and planted more than 1,300,000 seedlings. Mata Viva® flourished, attracting a broad range of partners from the agricultural, business and scientific communities, all united in their desire to foster biodiversity. In 2005, the Espaço ECO Foundation – set up by BASF with the support of the German government – assumed responsibility for the program. At this point, Mata Viva® began to engage directly with farmers and agricultural communities. The program is available in about 153 municipal areas across Brazil. Realizing that education was the catalyst for long-term change, Mata Viva®, developed an educational module to show future farmers how they could build a vital community by practicing conservation and sustainable land-use techniques. More than 2,800 teachers were trained and 230,000 students have benefited. A program started in 2020 restores forests in the Mata do Barreiro Rico green reserve. The reserve is one of the last sanctuaries of the southern muriqui monkey (Brachyteles arachnoides), which is classified by the IUCN as critically endangered.
In 2021, we continue with the restoration of the Mata do Barreiro Rico Green Reserve. The initiative has contributed to the connection of important fragments, building an ecological corridor.

Start year

-22.4637

**Longitude**
-45.1054

**Monitoring frequency**
Annually

**Measured outcomes to date**
Other, please specify
Hectares restored, Seedlings planted

**Please explain**
Mata Viva has not an explicit quantitative long-term goal on area protected or restored. Increase in numbers will depend on future level of engagement of participants. Annual monitoring occurs in the areas recovered in the BASF sites, covering about 170 hectares and all other restored areas are monitored in at least two years after the start of ecological restoration activities. In 2020 and 2021, 5 hectares were restored each year - totaling 10 hectares, in a locality where endangered fauna species are located. Thus, the initiative is contributing to recover forests in strategic locations for biodiversity conservation.

Project 2

**Project type**
Other, please specify
Forest and biodiversity conservation

**Primary motivation**
Voluntary

**Description of project**
Half of the area of the BASF - Demarchi plant, located in the municipality of São Bernardo do Campo, state of São Paulo, Brazil, is covered by preserved and regenerating native forest, totaling 30 hectares of native vegetation. The forest was named Suvinil Reserve.
In 2021, a survey of the biodiversity of the existing flora and fauna was carried out on the site. More than 170 species of flora and more than 100 vertebrate species were found. High resolution photographs of some specimens of the fauna were made and some filming was made to document the findings. The existing water springs were also mapped and a total of five were found.

**Monitoring frequency**
Annually

**Measured outcomes to date**
Other, please specify
Forest and Biodiversity conservation

**Please explain**
BASF performs the preservation of the site in an integral way, investing resources for the control and protection of the Suvinil Reserve. In 2022, it is planned to survey butterfly species and evaluate the potability of spring water.

**F7. Verification**

**F7.1**

(F7.1) Do you verify any forests information reported in your CDP disclosure?
Yes
F7.1a

(F7.1a) Which data points within your CDP disclosure have been verified, and which standards were used?

Disclosure module
F1. Current State

Data points verified
Data points given within our integrated annual report; sustainably sourced purchased volume, total volume.

Verification standard
ISAE 3000

Please explain
Data points verified:
Points verified include: − Scope of disclosure − Forest commodities consumption data.

Verification standard:
Forest data have mainly been verified by Deloitte as part of the moderate assurance for the 2020 Universal Registration Document, based on ISAE 3000 standard

Statements and figures pertaining to sustainability in the Management’s Report and Consolidated Financial Statements of BASF’s Annual Report are audited. The audit with limited assurance was conducted in accordance with ISAE 3000 (Assurance Engagements other than Audits or Reviews of Historical Financial Information) and ISAE 3410 (Assurance Engagements on Greenhouse Gas Statements), the relevant international auditing standards for sustainability reporting.

F8. Barriers and challenges

F8.1

(F8.1) Describe the key barriers or challenges to eliminating deforestation and/or conversion of other natural ecosystems from your direct operations or from other parts of your value chain.

Forest risk commodity
Palm oil

Coverage
Direct operations
Supply chain
Primary barrier/challenge type
Other, please specify
Supply Chain complexity

Comment
The oil palm complex is a bulk commodity value chain with huge complexity. Keeping up standards and requirements is currently down to the industry players as often enough the enforcement of laws and rules set up by the government is not happening (Indonesia, Malaysia). This gap in central control is tried to be overcome by the industry e.g., with satellite monitoring, HCSA commitments, concepts like HCS and HCV conservation. By nature, some elements are more difficult than others in “controlling” / improving like human rights.

Verified implementation of NDPE policies on the ground moving away from company driven approaches towards industry wide approaches

Comment
NDPE (No Deforestation, No Peat, No Exploitation) policies are a strong instrument to cut the direct link between deforestation and palm oil. KPI’s for an effective NDPE policy are:
- Supply chain transparency. Traceability of all sourcing at mill level, including publication of a mill list that includes GPS coordinates and parent company name.
- A robust grievance mechanism
- Effective monitoring mechanism
- A stringent and effective certification scheme, that is the lever for NDPE implementation on the ground.
