BASF produces formic acid in Geismar, Louisiana

FLORHAM PARK, NJ, November 11, 2015 -- BASF now produces formic acid at its new facility in Geismar, Louisiana for customers in the North and South America markets.

Eco-friendly, versatile and efficient formic acid is used in a wide range of applications, including animal nutrition, household and industrial cleaning, oilfield drilling and gas exploration, and deicing airport runways and roads.

About BASF Intermediates

The BASF Group’s Intermediates division develops, produces and markets a comprehensive portfolio of about 700 intermediates around the world. Its most important product groups include amines, diols, polyalcohols, acids and specialties. Intermediates are for example used as starting materials for coatings, plastics, pharmaceuticals, textiles, detergents and crop protectants. Innovative intermediates from BASF help to improve both the properties of final products and the efficiency of production processes. The ISO 9001 certified Intermediates division operates plants at production sites in Europe, Asia and North America. Around the globe the division generated sales to third parties of about €2.8 billion in 2014. For more information, go to www.intermediates.basf.com.
