BASF launches new xarvio® Agro Experts program in Brazil to increase access and use of digital farming technologies

- **Links agronomic consultancies and farmers via xarvio® FIELD MANAGER**
- **Enables agronomic consultancies to expand digital farming expertise**

Cologne, Germany/São Paulo, Brazil – BASF has launched an innovative program in Brazil that links independent, agronomic consultancies with farmers through its advanced [xarvio FIELD MANAGER](#) crop optimization platform.

The unique program, called xarvio Agro Experts, gives agronomic consultancies access to existing xarvio solutions that optimize and increase productivity in the field, specifically for soybean, corn, and cotton. It enables these consultancies to expand their digital farming knowledge and service offering, bringing even greater value to the work being done. It also ensures farmers can benefit from in-field support for the use of xarvio FIELD MANAGER and compatible technologies including drones, weather station devices and machinery terminals.

xarvio Agro Experts is a clear and practical response by BASF to understanding and meeting the needs of the agricultural industry. It underlines the company's commitment to proactively transforming agriculture, by making digital technologies more accessible through removing barriers to adoption and use.

Konstantin Kretschun, Global Head of BASF Digital Farming, comments: “Understanding and responding to the needs of the agricultural industry ensures we keep our focus on delivering value. Our xarvio Agro Experts initiative in Brazil underlines this approach, helping ensure more farmers and agronomic consultants can learn about, access and profit from the use of digital farming technologies, specifically the proven, measurable benefits provided by xarvio FIELD MANAGER. From a business perspective, xarvio Agro Experts is an important milestone in our journey to positively transform agriculture via precision digital farming technologies.”

Increasing agronomic consultancy knowledge and business offering

To become a xarvio Agro Expert, the agronomic consultancies must have accredited and valid agronomic certification specific to the area where they work. They also need to complete specialized theoretical and practical training on xarvio FIELD MANAGER and digital agriculture, which is provided by BASF and includes drone operation and regulation. On completion of the training, the agronomic consultancies can position themselves as xarvio Agro Experts and take xarvio products to customers they currently serve.

The innovative xarvio Agro Experts service is being implemented across eight Brazilian states, with the valued participation of local agronomic consultancies that have been trained by BASF. BASF is preparing to rollout the xarvio Agro Experts initiative to other markets.

About xarvio® Digital Farming Solutions – a brand by BASF Digital Farming GmbH

xarvio® Digital Farming Solutions is at the forefront of the digital transformation of agriculture, optimizing crop production. Its products, xarvio® FIELD MANAGER and xarvio® HEALTHY FIELDS, use an advanced crop modelling platform to provide independent, timely and field-specific agronomic advice. xarvio’s proven technology consistently delivers measurable benefits for farmers, helping them to produce crops more efficiently, sustainably, and profitably. About BASF’s Agricultural Solutions division

Farming is fundamental to provide enough healthy and affordable food for a rapidly growing population while reducing environmental impacts. Working with partners and agricultural experts and by integrating sustainability criteria into all business decisions, we help farmers to create a positive impact on sustainable agriculture. That’s why we invest in a strong R&D (Research & Development)

pipeline, connecting innovative thinking with practical action in the field. Our portfolio comprises seeds and specifically selected plant traits, chemical and biological crop protection, solutions for soil management, plant health, pest control and digital farming. With expert teams in the lab, field, office and in production, we strive to find the right balance for success – for farmers, agriculture, and future generations. In 2022, our division generated sales of €10.3 billion. For more information, please visit www.agriculture.basf.com or any of our social media channels.
