

Going green – fast and fair. Key levers for BASF and its stakeholders for the energy transition we all want.

- Increased sustainability literacy based on transparent, yet positive communication of the transition.
- Clear incentives and explicit ecological, societal, and economical benefits along the value chain that lead to action.
- Significantly higher investments that are distributed fairly to accelerate the green transition globally.
- Strong leadership that inspires employees, value chain partners and society to act.
- A political and regulatory framework that focusses on competitiveness and gives operational freedom to implement innovations.
- Willingness to stay in open and honest dialog and new levels of complementary collaboration and partnerships.
