Dear subscribers,

The integrated BASF report for the business year 2016 documents how sustainability contributions to the company’s success. As an industry leader and benchmarking member of RE100, BASF wants to make sustainable success a reality. A large and diverse team has been at work since 2015 to identify and evaluate sustainability issues for the report. In the current newsletter, we also report on a research project, which is designed to align the school’s values in space to the international Space Station (ISS) and provides an opportunity for students to conduct experiments on the International Space Station. We look forward to continuing our efforts in this important initiative.

Sustainability News

BASF report 2016 published

Closing all the figures to the previous business year, BASF’s corporate report was released at the end of November. An integrated report, the publication documents the company’s economic, environmental and social performance. The section ‘Corporate Responsibility and Sustainability’ lays out the company’s sustainability strategy and the new initiative ‘BASF’s Vision for a Sustainable World’. (Read more)

Space Farming

The first fruit experiment to be planted at JPL campus's third floor to grow lettuce has been successfully conducted. BASF provided the experiment with seeds, soil and other materials. The experiment is part of the company’s sustainability efforts. (Read more)

World leader for corporate action on water security

BASF’s focus has been on identifying global threats for the actions and strategies to protect water resources. The company is committed to enhancing water management in its business processes and operations. (Read more)

Energetically efficient and sustainable construction

BASF is providing the global construction industry with new solutions for building sustainably and efficiently. The company’s sustainable building solutions help to create a more efficient building business, which in turn provides benefits to the environment. (Read more)
