Sustainability News

Dear subscribers,

"Climate protection is a key task for me." These were the words of BASF's Chairman of the Board of Executive Directors, Martin Brudermüller, during a meeting of the "Alliance of CEO Climate Leaders". On November 18, 2016, BASF initiated the initiative in order to establish close cooperation with other industries. The climate initiative from BASF is the first initiative of this kind at BASF. The "Climate Leaders" initiative includes the largest industrial companies in Germany and the world, and is a science-driven, multi-stakeholder action. The initiative is intended to push the implementation of climate protection and sustainability into the public and political agendas. The goal of the initiative is to identify and coordinate climate protection and sustainability measures that can be achieved within the companies individually and collectively. The initiative aims to achieve a noticeable impact in the near future. The initiative is open to all industries, and any interested company can join at any time. The initiative aims to achieve a noticeable impact in the near future. The initiative is open to all industries, and any interested company can join at any time.
