Dear reader,

The global Corona pandemic shows how vital international cohesion, solidarity and our responsibility for each other are. “We find ourselves in a very challenging situation. But we have proven time and again that we are particularly strong in times of crisis,” said Martin Brudermüller, CEO of BASF SE in his recent address to the workforce. “Especially in times of crisis, it is particularly important for the supply of society that the economy, trade, logistics and administration continue to function. We at BASF make an important contribution to this.” The company takes this contribution to heart, not only in the current situation but also in its overall economic activities. Hereby, BASF follows the principle that corporate value creation can only succeed in a sustainable way if economic, ecologic and social values are taken into account equally.

This issue of Sustainability News highlights projects with which BASF wants to drive social change and a positive future development. Learn more about our value creation in the Corporate Report 2019 and read about the CDP recognition for our water management and climate protection. Also interesting: our Creating Chemistry magazine article about innovations for the global nutrition of the future and our cooperation for the recycling of battery materials.
