

Developing together. Building with each other.

We create chemistry for advanced construction.

Construction Additives

BASF Construction Additives and Formulation Know-How for Construction Materials

To achieve groundbreaking formulations providing outstanding workability and physical properties, your system needs advanced raw materials.

The properties of construction materials, such as dry mortars or mastic systems, are influenced by the quality of local raw materials. Therefore, interactions between organic and inorganic binders, fillers and a range of chemical additives need to be controlled to ensure the best performance of the system.

We create chemistry for advanced formulations: a broad range of powder and liquid additives which enable you to formulate innovative products.

Our application-focused technical experts in our laboratories support you in optimizing your formulations and choosing the right raw materials.

Additionally, we provide you with the right solution for your specific raw materials and special local requirements.

We especially support you in:

Repair Systems and Infrastructure

Flowable Systems

- Self-levelling underlayments
- Cementitious and calcium sulphate-based screeds
- Non-shrink grouts

Non-sag Applications

- Cement-based ceramic tile adhesives
- Exterior insulation and finishing systems (EIFS/ETICS)
- Plasters, renders & skim coats

Creating chemistry for more sustainable Construction Materials

To drive sustainable development, we reviewed our entire portfolio under sustainability aspects by using the standardized "Sustainable Solution Steering Method*". Looking at economic, environmental and social needs, we have identified key issues along the entire value chain for the Construction Materials segment. On this basis, we are able to assess the sustainability contribution of each product in its specific application.

- Material Efficiency
- Fast Construction
- Easy Application
- Low VOC
- Drinking Water Approval

Vetting and Workability	y Agents												
Melflux® grades	Polycarboxylic Ether												
Melment [®] F 10 / F15G / F17G	Melamine-Conden- sate/Powder	•									Improved mixing		
Vinapor® WA 2000 F	Keton Resin			•	•	•	•	•	•	•	Improved workability; Micro air voids; Creamy rheology	9	
/inapor® WA 3710 F	Non-ionic surfactant (EO/PO block-copoly- mere (on carrier)				•	•	•	•	•	•	Good Weeting; Improved workability; Robust stabile air voids	O (9	
Vinapor [®] WA 3918 F	Non-ionic surfactant (Oleo-alkyleneoxide- block copolymer on carrier)		٠			٠	٠	•	٠	•	Excellent dispersing and wetting proper- ties; Marked viscosity reduction; Increases color development and stability in pigmen- ted systems	O (4)	
Starvis® SE 25 F	Cationic Starch Ether/ Powder					•				•	Stickness reduction; Little influence on consistency; no cement retardation		
Rheology Modifying Ag	ents												
Starvis [®] 308 F	Synthetical Polymer/ Powder					•					Rheology improvement, water retention, no retardation		
Starvis® S 3911 F	Synthetical Polymer/ Powder	•	•	•	•		0		0	0	Swellable polymer for open time and sag resistance improvement, workability improvement	(
Starvis® SE 30 F	Starch Ether/Powder	•	•	•	•	•		•	•	•	Sag resistance introduction, workability approvement		
Starvis [®] SE 35 F	Starch Ether/Powder	•	-	-	-	•	•	•	•	•	Sag resistance introduction, workability approvement		
Starvis® SE 45 F	Starch Ether/Powder		•								Efficient sag resistance introduction, low retardation		
Starvis® RS 421/01 F	Synthetical Polymer/ Powder	•									Efficient thickening compound for basic CTA; Open time and sag resistance improvement	(
Starvis® T 50 F	Synthetical Polymer/ Powder										Very efficient sag resistance introduction		
Starvis® T 51 F	Synthetical Polymer/ Powder	•									Very efficient sag resistance introduction, quick and easy mixing		
Air entraining Agents													
Vinapor® AE 3912 F	Anionic surfactant (Sodium lauryl sulphate)										High performing foaming agent, produces particularly fine, stable air bubbles	9	
Vinapor [®] AE 3913 F	Anionic Surfactant Composition					•					Universal product, Improved powder and handling properties (health & safety)	9	
Vinapor® AE 3914 F	Anionic Surfactant Composition			•	•		•			•	Fully synthetic robust air entrainer, introduces stable air	Ø	
Defoamers													
Vinapor [®] DF 9010 F	Fatty alcohol alko- xylates and polysilo- xanes on inorganic carrier/Powder		•								Very efficient defoaming effect, easy dosing, low VOC (useful for EMICODE® EC-1, RAL-UZ 113 conform)	9	
Vinapor® DF 2922 F	Silicone free defoa- mer blend/Powder		•								Lowest Air-Entrainment during mixing, Excellent defoaming, suitable for formulations complying with BFR XIV (drinking water approval for DE)		
Vinapor® DF 2938 F	Polyether derivative of fatty acid on inert carrier										General purpose defoamer		
Vinapor® DF 2941 F	Mineral oil based/ Powder		•								General purpose defoamer, RAL-UZ 113 conform		
Hydration Control Addi	tives												
HyCon® S 3200 F	C-S-H seeding/										Acceleration of systems based on OPC		
	Powder		•					•			and increase of early strength development by C-S-H seeding technology, slight dispersing effect	900	
HyCon® S 6100 F	C-S-H seeding/ Powder	•									Acceleration of systems based on OPC and increase of early strength development by C-S-H seeding technology, higher viscosity for sag resistance	900	
HyCon [®] S 7100 L	Aequeous suspension of C-S-H seeds/ Liquid										Acceleration of systems based on OPC and increase of early strength development by C-S-H seeding technology	900	
HyCon® S 7042 F	C-S-H seeding/ Powder	•	•	•							Alkali free accelerator of OPC based on C-S-H seeding technolgy, improved early strength	900
