Dirty but clean
Mica-based pigments for cosmetics
Mica-based pigments for cosmetics

Boost color, texture, and sparkle with natural mica-based pigments that can be used for various cosmetic applications.

Cellini®
Cellini® is a line of cosmetic colorants that links clean, intense, FDA-approved organic colors with iridescent effect pigments. Thanks to its multifunctionality, bold colors can be created when used alone as well as subtle washes of color when used in combination with white or interference pigments.

Cloisonné®
Cloisonné® effect pigments impart dramatic color and varied pearlescent effects to many types of color cosmetics and personal care products. They are available in a variety of grades, which provide different degrees of luster ranging from a soft, satiny look to high sparkle.

Flamenco®
Flamenco® pigments are used to create lustrous or opalescent effects in all types of cosmetics and personal care products. They are available in a wide range of colors, as well as white, and in a variety of grades providing many degrees of luster and differing effects.

Gemtone®
Gemtone® pigments offer a wide range of lustrous colors for distinctive cosmetics and personal care products. Like certain precious gems, these rich colorants derive color from both light interference and light absorption. Combined with absorption pigments, colors with unique liveliness and intensity can be produced.

Timica®
Timica® luster pigments impart shimmering effects to cosmetic and personal care products, both as white pigments in a variety of lusters and as color pigments in a range of “metallic” and earth tones. They are free flowing powders that can be used alone or blended with other effect enhancing pigments to improve visual impact.
